

The ccTLD Role in ICT for Development

Introduction

- RFC1591 infers ccTLD Managers should act in the best interests of their local Internet community
- ISOC vision: “The Internet is for everyone”
- InternetNZ mission:
An “open and uncaptureable” Internet”

ICT for Development

- Is the responsibility for a ccTLD just to run a world class DNS service?
- What InternetNZ does, outside of .nz management:

InternetNZ

- Encourages Government in establishing useful political and regulatory environment
- Encourages industry in self regulation and best practice
- Shows technical leadership in terms of new technologies
- Invests in outreach programmes for up-skilling of the technical community
- Sponsors technical scholarship

InternetNZ

- We will consider any project that increases use of, or confidence in the Internet!

Thank you

Keith Davidson
