• Open new accredited Registrars in 1\textsuperscript{st} February, 2016
  (detailed info in \url{http://registrar.pandi.id} or send email to akreditasi@pandi.id)
.ID Smash
Domain Name Market
in Indonesia

• Government deploys “One Million Domain Name Program” within 3 years
• Short-Character and Exclusive Domain Name
• .id goes Global (planned)
New Wave of New g-TLD vs .ID

- \( \Sigma \text{cc-TLD} = 254 \) – remains constant (closed char. by ISO-3166-1 & 3166-2)
- \( \Sigma \text{g-TLD} = >600 \) – growing by approval/new-delegations (Open Char.)

APTLD roles to build the policy which is topic related to market share analysis where g-TLDs new character has no policy by ICANN to limit it or even limitless. This is important issue to rise it as one of the long term agenda with ICANN.

#case for .id in conjunction with gTLDs competition is *anything.id* solution
THANK YOU
